

10th grade homeschool, on one page

The courses a 10th grader usually takes, what each one is worth in credits, and which ones Arbor writes for you.

CORE COURSE	CREDIT	WHO WRITES IT	WHAT IT COVERS
English 10	1	Arbor writes it	World literature, argument and analysis essays, grammar and style, and a research paper
Geometry	1	Arbor writes it	Reasoning and proof, lines and triangles, polygons, transformations, similarity, right triangle trig, circles, area and volume
Chemistry	1	<i>Your own program</i>	Atoms, the periodic table, bonding, reactions and stoichiometry, with real labs
Geography	½	Arbor writes it	The world's regions and peoples, maps, and how place shapes history
ELECTIVES TO CHOOSE FROM			
Life Skills	½	Arbor writes it	Talking like a grown-up, finding a job, resumes and interviews, car care, and getting around
Speech & Debate	½	Arbor writes it	Writing and giving speeches, and arguing both sides of a question
Spanish II	1	<i>Your own program</i>	More listening, speaking and grammar, with the same program as Spanish I
Physical Education	½	<i>Your own program</i>	A sport, a class, or a fitness plan, done rather than read
Bible	1	Arbor writes it	The Gospels and Acts: the world Jesus was born into, the four Gospels, the resurrection, and the early church

A credit is about 120 hours of work, or 180 for a lab science, or a finished course. A typical diploma is about 21 credits over four years, and about 24 for a college-bound student. Your state and your teen's colleges set the real numbers.

Want every day of this planned for you?

Arbor writes the lessons for the courses it teaches, lays out your own programs beside them, and keeps the transcript. Free for 14 days.
