

11th grade homeschool, on one page

The courses an 11th grader usually takes, what each one is worth in credits, and which ones Arbor writes for you.

CORE COURSE	CREDIT	WHO WRITES IT	WHAT IT COVERS
American Literature	1	Arbor writes it	American writers from the colonies to today, with essays on what they read
Algebra II	1	Arbor writes it	Function families, quadratics and complex numbers, polynomials, exponents and logarithms, sequences, trigonometry, and probability
Physics	1	<i>Your own program</i>	Motion, forces, energy, waves and electricity, with real labs and plenty of algebra
U.S. History	1	Arbor writes it	The first colonies to today, read from primary sources
ELECTIVES TO CHOOSE FROM			
Personal Finance	½	Arbor writes it	Paychecks and budgets, banking, credit and debt, taxes, insurance, and saving for later
Psychology	½	Arbor writes it	How people think, learn and grow, and how the mind is studied
Music Appreciation	½	Arbor writes it	Great composers and their music, and what to listen for
Physical Education	½	<i>Your own program</i>	A sport, a class, or a fitness plan, done rather than read
Bible	1	Arbor writes it	The letters and Revelation, and how the Bible came to us

A credit is about 120 hours of work, or 180 for a lab science, or a finished course. A typical diploma is about 21 credits over four years, and about 24 for a college-bound student. Your state and your teen's colleges set the real numbers.

Want every day of this planned for you?

Arbor writes the lessons for the courses it teaches, lays out your own programs beside them, and keeps the transcript. Free for 14 days.
