

12th grade homeschool, on one page

The courses a 12th grader usually takes, what each one is worth in credits, and which ones Arbor writes for you.

CORE COURSE	CREDIT	WHO WRITES IT	WHAT IT COVERS
British Literature	1	Arbor writes it	British writers from Beowulf to the moderns, with longer essays
Pre-Calculus	1	<i>Your own program</i>	Functions, trigonometry, and the ideas calculus is built on
Anatomy & Physiology	1	<i>Your own program</i>	The body's systems, studied with real labs
U.S. Government	½	Arbor writes it	The Constitution, the three branches, and how a citizen takes part
Economics	½	Arbor writes it	Supply and demand, markets, money, and how a household and a country budget
ELECTIVES TO CHOOSE FROM			
Life Management	½	Arbor writes it	Renting, setting up a home, turning 18, bills and records, and a month on their own
Philosophy	½	Arbor writes it	The big questions, and how great thinkers have answered them
Calculus	1	<i>Your own program</i>	Limits, derivatives and integrals, for a student who has finished Pre-Calculus
Physical Education	½	<i>Your own program</i>	A sport, a class, or a fitness plan, done rather than read
Bible	1	Arbor writes it	Church history, the creeds, and honest answers to hard questions

A credit is about 120 hours of work, or 180 for a lab science, or a finished course. A typical diploma is about 21 credits over four years, and about 24 for a college-bound student. Your state and your teen's colleges set the real numbers.

Want every day of this planned for you?

Arbor writes the lessons for the courses it teaches, lays out your own programs beside them, and keeps the transcript. Free for 14 days.
